

AVCRM CONNECT

A NEW ANGLE FOR RPAS LIVE STREAMING

Setting the standard for live operations oversight and management.

Stream sharing

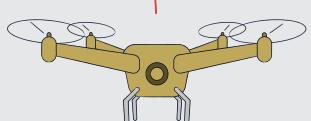

Internal & external crowd reporting

Multi-device compatible

AVCRM Connect is the result of years of industry experience, client feedback and Australian ingenuity. It brings accessible live streaming, operations oversight, and media management to RPAS operators of all sizes.

When paired with **AVCRM Live**, its native companion, AVCRM Connect provides seamless stakeholder engagement for live operations of all sizes.

Pay for What You Use

Customisable infrastructure, starting and stopping on demand, provides flexibility. Choose the size and power of your service based on your needs to manage costs efficiently.

Platform Agnostic

AVCRM Connect is device-agnostic, supporting a range of streaming protocols. The intuitive operations overview page displays connected streams, aircraft and other devices in a clear and logical way.

Standardised User Interface

Monitor your fleet with ease thanks to AVCRM Connect's efficient UI. It ensures optimal situational awareness during operations, displaying critical information in a well-thought-out visual scan.

Advanced 3D Maps

AVCRM Connect's overview maps incorporate terrain, user-created custom shapes and airspace in 2D or 3D. This provides a three-dimensional picture of an operation in real-time, transforming emergency services and law enforcement operations.

Flight Planning Tool

Flight planning tools that are integrated with advanced maps allow users to build, store and execute automated flight plans for a range of missions. This eliminates the need for additional third-party applications.

Stream Sharing

Share live feeds easily with internal and external stakeholders, such as emergency services and law enforcement, with low-latency streaming. You can provide instant access via QR codes or stream share links.

Live Stream Records

Store live stream footage with minimal delay, allowing end-users to access and review the files seconds after recording. This feature ensures data security in case of a crash and minimizes upload times.

Accessibility for All

AVCRM Connect opens advanced live streaming capabilities to operators at all levels, from wedding photographers to police agencies operating around the clock. Its pay-as-you-use model empowers operators to build capabilities without being hindered by cost and availability constraints.

Dedicated Infrastructure

Enjoy enhanced data security with dedicated infrastructure that eliminates performance fluctuations and ensures consistent, high-performance services.

Outstanding Support

Automatic deployment and 24/7 client control, coupled with real-person support, helps streamline implementation. Our client-centric approach will have you up and flying in no time.

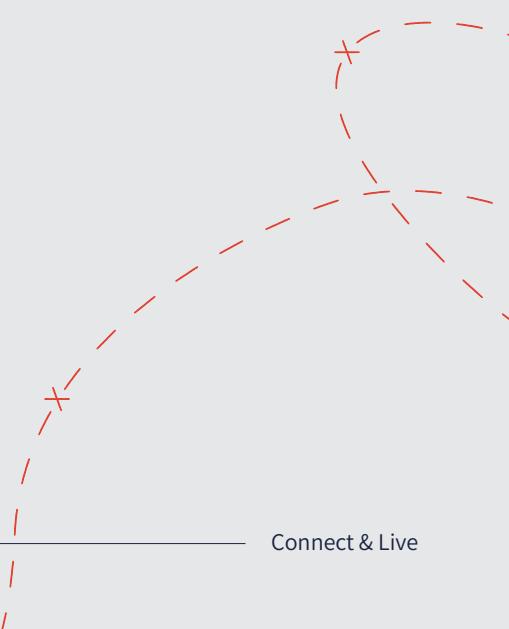

Bind the Whole Fleet

Our pay-as-you-use model allows you to bind your entire RPAS fleet without cumbersome costs. This capability gives emergency services the flexibility to respond immediately, with as many assets as needed, without straining budgets.

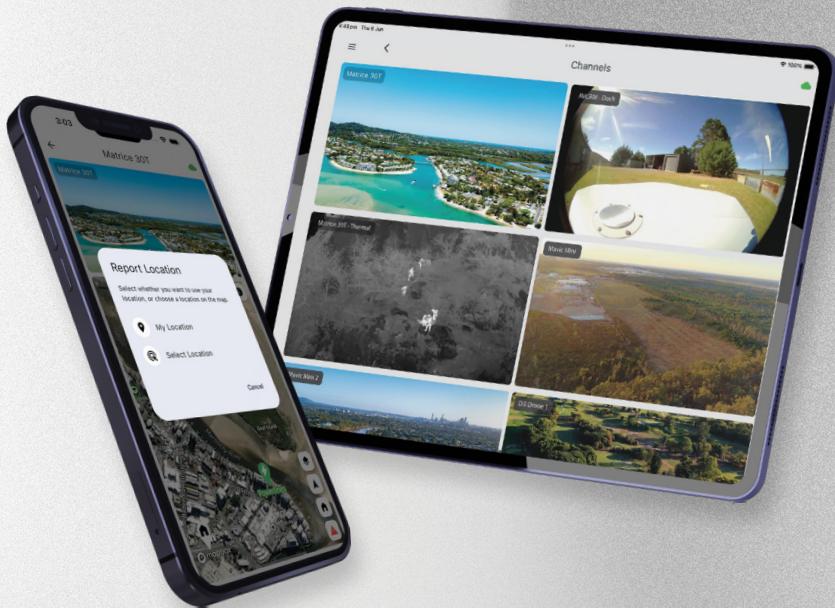

Operational Chat

This live chat feature works to provide an additional communication layer between users involved with an operation.

AVCRM CONNECT REVOLUTIONISES RPAS LIVE STREAMING WITH UNPARALLELED FLEXIBILITY AND COST CONTROL.

Combine with AVCRM Live on Apple and Android.

AVCRM Live is the free and perfect companion tool, allowing AVCRM Connect users to share data with internal and external stakeholders during live operations. This native application provides a highly user-friendly interface to view video and telemetry live, as well as providing the ability for internal or external users to crowd report points of interest. The app also connects into the operational chat feature of AVCRM Connect and utilises push notifications to ensure critical communications are received.
